

Abstract of the Disclosure

A method and related system obtains consent from an individual for computer-aided delivery of compliance information. Initially, a computer-readable data storage device is provided to the individual. The device stores the compliance information and computer-executable instructions. By inserting the device into a computer, the instructions are executed and the individual is prompted by the computer to consent to the computer-aided delivery of additional compliance information. Once consent is indicated, it is communicated from the individual's computer to another computer such as a server over, for example, a modem connection. Having secured the individual's consent, the additional compliance information can be delivered to the individual's computer as, for example, a file attachment to an email message.
